5: Dobby K-4 (no date) 1950 ALl Southeast Asia ALl

434 averaged below $2 per person per annum and revenues were of that low order for all Southeast Asia countries except Malaya, where it was about $70 per person, a sign that Malaya, of all these countries, was the one where work and activities centred on money and had moved farthest from the subsistence principle.

It has to be noted that the small amount of money involved in such ecologies does not mean poverty in the European sense: it represents only that margin of necessities which is outside the subsistence ecology. In addition to the little money it obtains, each family in general has both its food and its domestic equipment produced by itself, or in conjunction with helpers from the village community. This is a state of society long since outgrown in Europe though we have to allow for it in every phase of Southeast Asia industry and trade and to assume it will continue to play a part in future changes.

Agricultural Processing

256 249 Because Southeast Asia is so overwhelmingly agricultural its mechanical industries relate largely to agricultural processes. Rice mills, sugar mills, starch factories (from sago and tapioca) and sack factories, have all grown up in connection with agricultural processing in every one of these territories. In addition, rubber factories, oil presses and sugar mills have been established on western lines in association with European-style agricultural developments. The fabrication of rubber has not gone far within this region; tyres have been made in Java where also mass-produced rubber shoes were made for Southeast Asia markets. For the most part, mechanical processing industries are located peripherally to the countries concerned and they operate primarily for immediate export, though small rice, brick and sugar factories have spread inland away from coastal sites.

Textiles

439 288 Apart from food, the chief personal need of Southeast Asia people is cloth and the demand for textiles ranks as by far the greatest single item of fabricated goods. Most of the textiles recorded are imported; the domestic industry has tended to disappear except in the remoter districts, and textile factories have not been set up to any extent within Southeast Asia. Cotton spinning at Semarang, Tegal and Damak and some 200 small
